

EDGE TRIM APPLICATION A200

PRODUCT DATA SHEETS

Product Description

The A-Type drip trim is a drip trim fitted along the lowest edge of a roof, typically, where rainwater flows into the guttering. The A200 is designed for smaller fascia details or restricted installations.

Technical Specifications

Product Code:	TRA170
Material:	Glass Reinforced Polyester (GRP)
Length:	3 metres
Profile Type:	Drip Edge
Colour:	Light Grey

Installation Instructions

Step 1: Fix Battens

- Install two support battens along the roof perimeter.
- Inner batten: flush with the roof deck.
- Outer batten: 10mm lower than the inner to create a recess for the trim and gutter.

Step 2: Apply Adhesive

- Apply a continuous bead of trim adhesive to the face of the outer batten.

Step 3: Fit the Trim

- Press the trim firmly into place.
- Secure by nailing into the decking only.
- Do not nail through the front face of the trim.

Notes

Low-pitched roofs (less than 1:80)

- Water may pool behind the trim; to prevent this, plane 2mm off the decking edge to allow the trim to lay flush.
